MANUAL

Quick Filters

v0.0.1

Description

This Quick Filters for Magento 2® extension extends default Magento functionality allowing you to create custom Filter Widgets anywhere in your store. Static Block, Pages and using the default widget functionality.

Installation

The installation is the same as for any other module in Magento.

1. Decompress the module right in the root of your Magento installation.
2. Clear Magento cache.
3. If you have the compiler enabled, you will have to run the compilation process.
4. You might need to logout and login again in the backend.

The module will add a new section in System > Configuration to configure your settings for the module.

Widget Set-Up

1. Go to **Content→Widgets** and click on **Add Widget**
2. Choose **YD Quick Filter** from the Type dropdown field, choose your theme package and click **Continue**
3. Fill in the information for the **Widget** and continue to **Widget options**.
4. In the **Widget Options** define the filters and click **Save**.

Usage on the Frontend

There are few options here:

1. You can use the **Layout Updates** and place the widget where you need it to be.
2. Insert custom filter inside of the **Static block**
 - Open any static block and click on **Insert Widget** and follow the **Widget Set-up** instructions.
3. Insert custom filter inside of the **Static Page**
 - Open any static page and click on **Insert Widget** and follow the **Widget Set-up** instructions.
